Add Logins to Vault

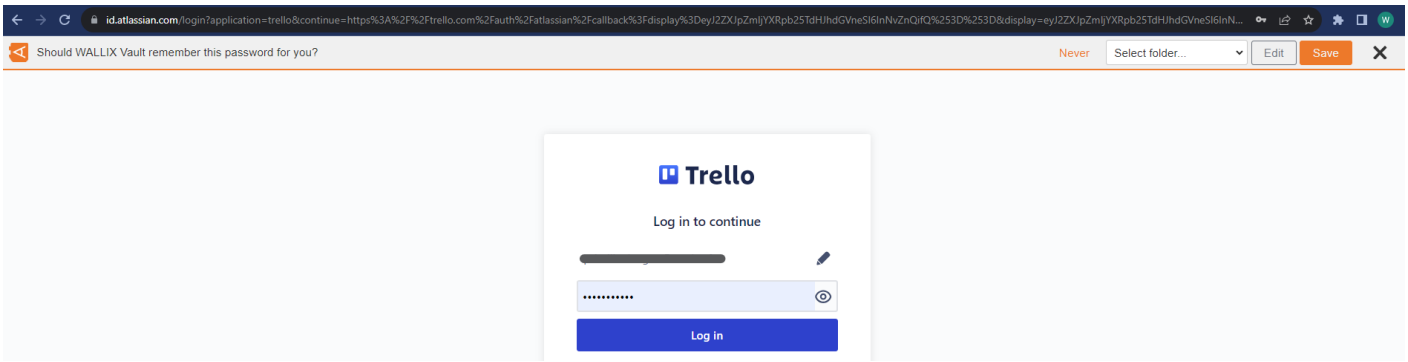

There are 2 ways to auto-fill a Login to the Vault.

This function is available for Logins, Cards and Identities.

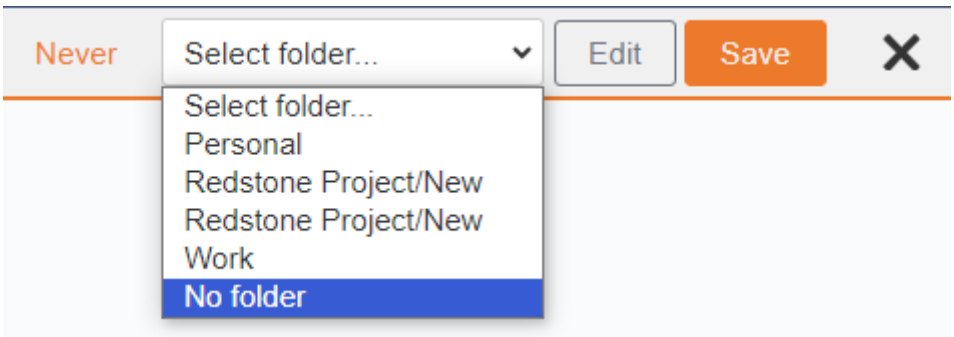

Add to Vault using Automatic Prompt

Navigate to the **Login Screen** of a **website**.

If this login is not already saved in WALLIX Enterprise Vault, a **prompt** displays **offering to save** the Login details for this Website.

Choose a **Folder** to add the Login to this Folder in the Vault. This field is **optional**.

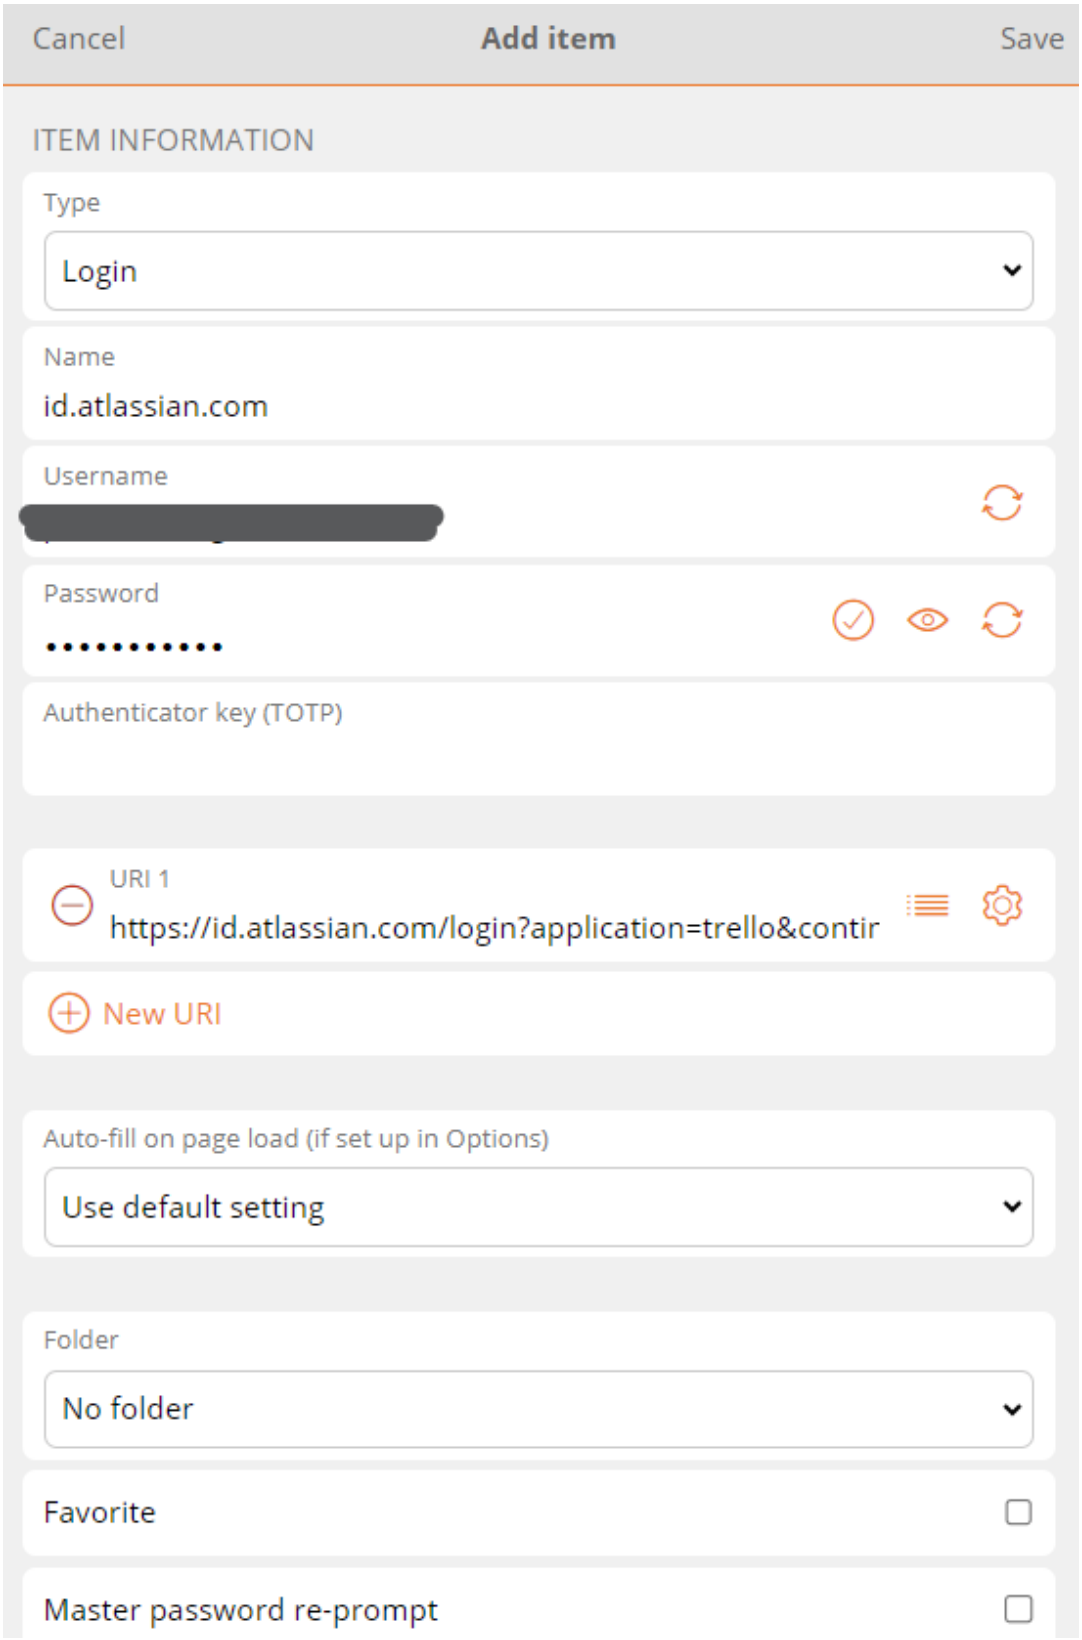

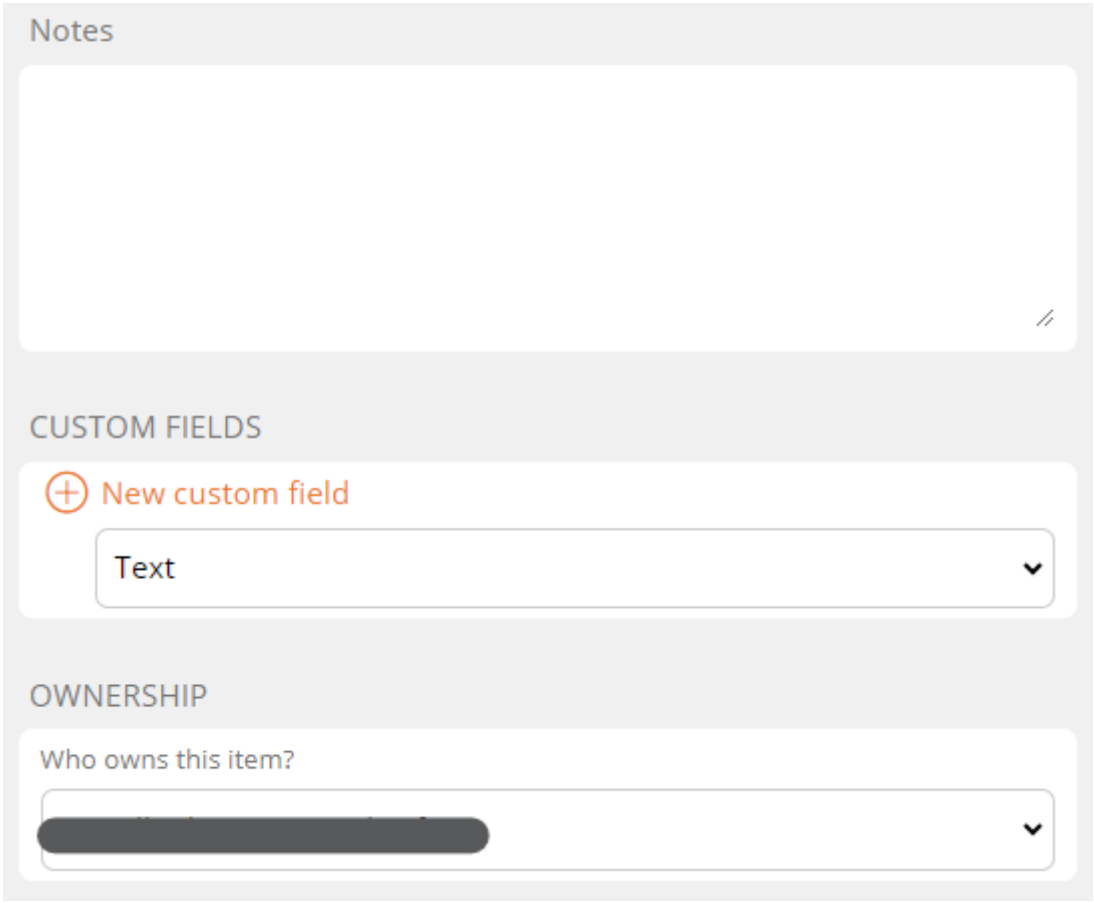

> Items are **added** to the **User's Individual Vault** and not a Shared Vault.

Click the **Save button.**

The **Add Item Screen** displays with the **fields prepopulated** with the Login details.

Modify fields, if required.

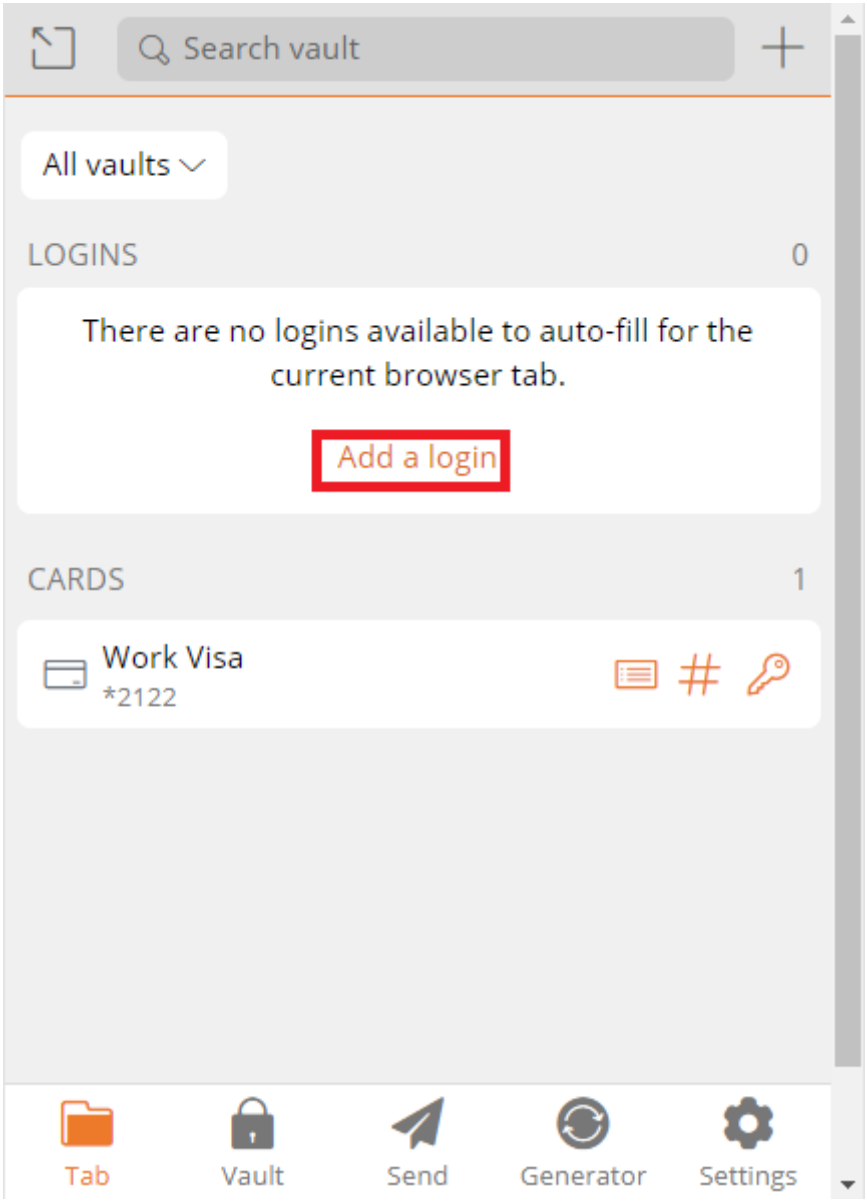

Click **Save** to Save Item to Vault.

Alternatively, click **Cancel** to cancel the operation.

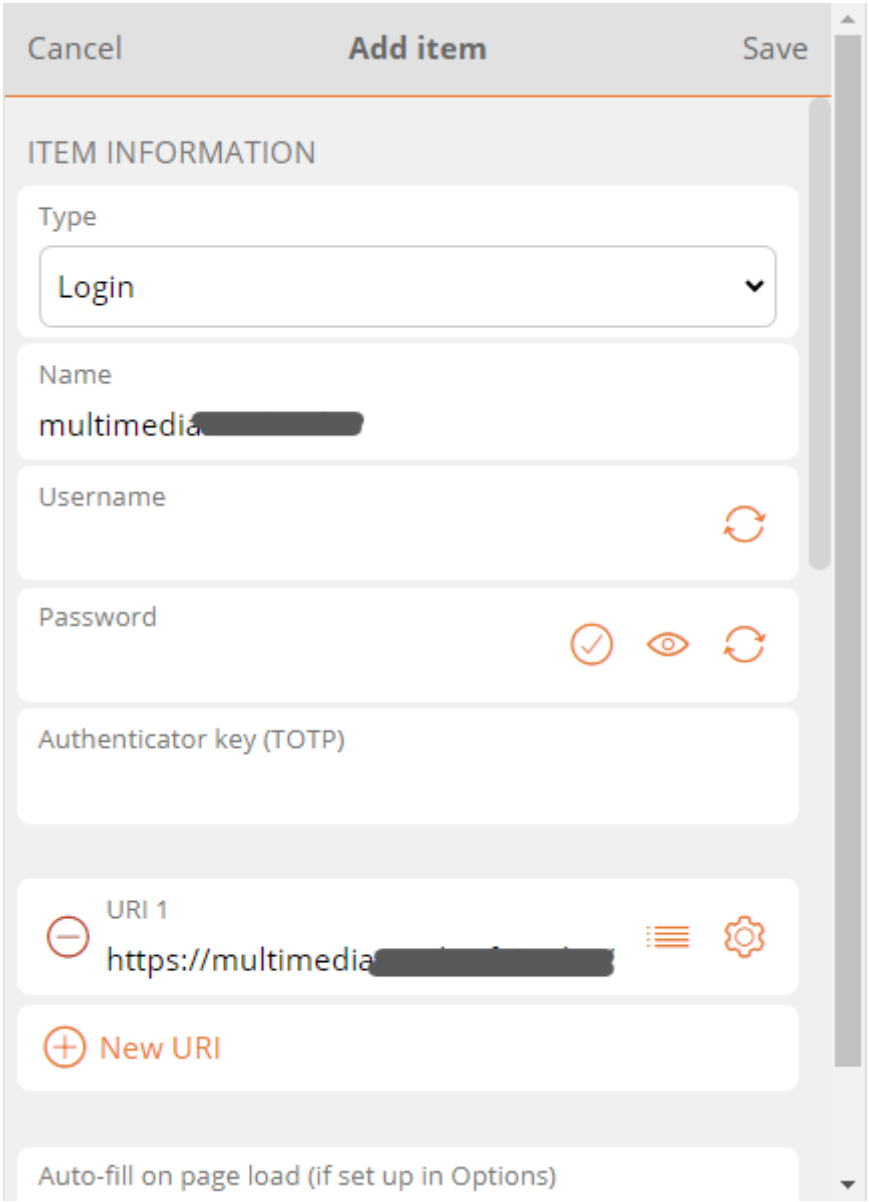

Add to Vault Manually

From the **Vault Screen** of the **Browser Extension**, click **Add a login.**

The **Add Item Screen** opens.

The **elements** that the Browser Extension could **recuperate** from the **browser** are **prepopulated**.

Enter the **remaining fields**. Click **Save** to create Login.

Alternatively, click **Cancel** to cancel the operation.
