

# Create Nested Folder

Folders can be created or nested inside other folders.

Click on the **New Folder** button to create a new Nested Folder.

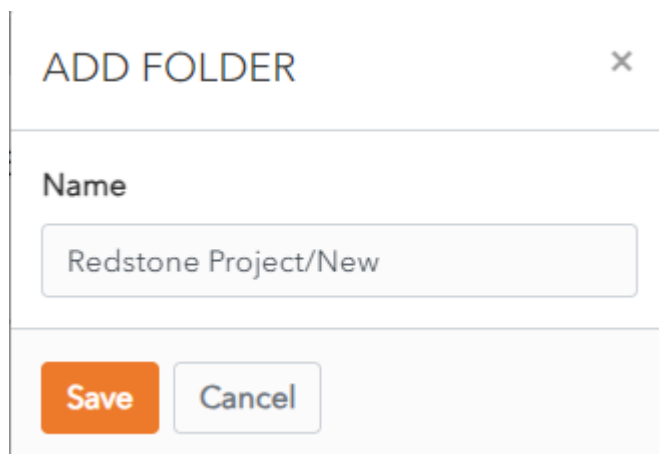

The screenshot shows the OneDrive web interface. At the top is a navigation bar with links: Vaults, Send, Tools, Reports, and Shared vaults. On the right of this bar is a user profile icon labeled 'PD'. Below the navigation bar is a sidebar on the left with a 'FILTERS' section. Under 'FILTERS', there is a search box labeled 'Search logins'. Below that are sections for 'All vaults' (listing 'My vault', 'MyShared', 'Team', and 'New shared vault') and 'All items' (listing 'Favorites', 'Login', 'Card', 'Identity', and 'Secure note'). A 'Folders' section is expanded, showing 'Personal', 'Work', and 'No folder', with a red box highlighting a '+' icon next to it. The main content area is titled 'My vault' and has a '+ New item' button. It displays a table of items:

<input type="checkbox"/>	All	Name	Owner	
<input type="checkbox"/>		vault-trial-37580.trustelem.com joe.bloggs	Me	⋮
<input type="checkbox"/>		Work Email joe.bloggs	Me	⋮

Use the « / » **forward slash** delimiter to define the folder structure of your nested folder.

For example, create a new folder called **Redstone Project/New**.

The screenshot shows a modal dialog box titled 'ADD FOLDER' with a close button (X) in the top right corner. Below the title is a 'Name' label and a text input field containing the text 'Redstone Project/New'. At the bottom of the dialog are two buttons: 'Save' (orange) and 'Cancel' (white with a grey border).

If the folder called **Redstone Project** already exists, a nested folder called **New** is created inside the **Redstone Project** folder.

To create a nested folder called **Trees** inside the **New** Folder, create a new folder called **Redstone Project/New/Trees**.

ADD FOLDER

Name

Redstone Project/New/Trees

Save

Cancel

A nested folder called **Trees** is created inside the **New** folder.

There are no items to list.

+ New item

If you Search inside the **Redstone Project** Folder, it will return items in the Redstone Project Folder but **not items inside the New and Trees nested** folders.

There is **no limit** to the **depth** of nested folders, but it can be impractical to create too many.
