Create WALLIX Entreprise Vault account

Click on the WALLIX Enterprise Vault application in the WALLIX Trustelem website.

The **first time you enter** your WALLIX Enterprise Vault you will be presented with a **Create Account** screen.

Choose a Master Password and enter it in the **Master Password** field.

Re-enter the Primary Password chosen in the **Re-type master password** field.

Enter a Password Hint in the **Master password Hint** field.

The checkbox **Check known data breaches for this password** is **checked** by **default**. Uncheck only if you do not need this check.

> If you forget your Password and click on the **Get Master Password Hint** link, you will be sent the Password Hint that you created the first time you logged in. This should be a word or phrase that helps you to remember your password but doesn't help other people to guess your password.

Click on the **Create Account** button to create your account. The account is created and the **Enterprise Single Sign-On Page** is displayed.

Alternatively, click **Cancel** to cancel account creation.
