

# Domain Equivalencies

It is possible to link equivalent domains, for example, google.com, youtube.com and gmail.com.

This is useful where **multiple domains** use the **same login credentials**.

Click on the **User Icon**, on the top right-hand side of the screen, to display the **User Menu**.

Click on **Account Settings** and then **Domain Rules**. The **Domain Rules Screen** is displayed.

Domain rules

## Domain rules

If you have the same login across multiple different website domains, you can mark the website as "equivalent". "Global" domains are ones already created for you by WALLIX Vault.

### Custom equivalent domains

+ New custom domain

Enter a list of domains separated by commas. Only "base" domains are allowed. Do not enter subdomains. For example, enter "google.com" instead of "www.google.com". You can also enter "androidapp://package.name" to associate an android app with other website domains.

Save

### Global equivalent domains

youtube.com, google.com, gmail.com

apple.com, icloud.com

Click the **new custom domain** button.

## Domain rules

If you have the same login across multiple different website domains, you can mark the website as "equivalent". "Global" domains are ones already created for you by WALLIX Vault.

### Custom equivalent domains

ex. google.com, gmail.com

+ New custom domain

Enter a list of domains separated by commas. Only "base" domains are allowed. Do not enter subdomains. For example, enter "google.com" instead of "www.google.com". You can also enter "androidapp://package.name" to associate an android app with other website domains.

Save

Enter the **equivalent domains, delimited by a , comma.**

Click **Save** to save changes.
