Login Items

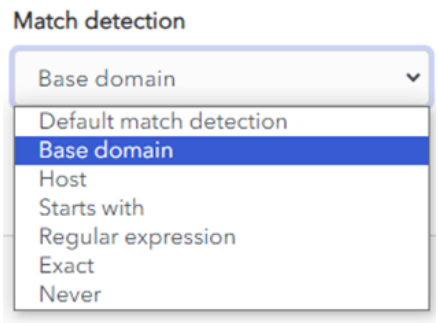

You can use a **Login Item** to store information about an account that requires a login, for example an email account, a CRM account or a social media account.

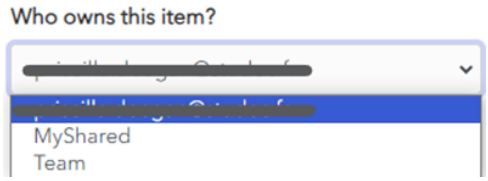

The following fields are available. Only the name field is mandatory.

- **Type**: Login, for Login Item.
- **Name**: Choose a name that easily identifies the item.
- **Folder**: This dropdown allows you to choose the folder you want to add the login to.
- **Username**: Your account username.
- **Password**: Your account password. You have different password options to improve the security of your passwords.
  - **Password Generator** button generates a strong password for your login.
  - **Check Password Integrity**
  - **Show/Hide Password Character Count**
  - **Copy Password to clipboard**
  - **Show/Hide Password**
- **Authenticator key (TOTP)**: Your authenticator key use to generate a Time-based One-Time Password (if in place for this account).
- **URI 1**: Uniform Resource Identifier (URI) or Website address for this account.
  - You can add extra URIs using the New URI button.
  - You can click on the button to open the URI in a new browser window to easily confirm the correct URI.
  - You can also choose from different options in the Match Detection dropdown to match the URI to an existing URI.

- **Notes:** You can add notes about this login.
- **Custom Fields:** You can add one or more custom fields. Learn more about Custom Fields.
- **Master Password re-prompt:** Check this box to be prompted to enter your Master Password to access this login.
- **Ownership:** Choose which Vault owns this item from the dropdown menu. By default it is owned by your Vault unless you choose otherwise.

- Click the ☆ favourites button to **add** this item **to** your **favourites**.
