# Options Overview

When you login to WALLIX Vault, the **Vault Home Screen** is displayed.

A number of **options** are possible within your Vault:

- You can **Search and Filter** to find Items in the Vault.
- In the Preferences Screen, you can set your **Timeout Preferences**, **Change Language**, **Change Theme**, etc.
- You can set **Domain Equivalencies** for Domains that use the same Login.
- **Sync Vault** to synchronise the Vault Items in the Web Browser Extension.
- User and Configure **Shortcuts**.
- Make the most of **Custom Fields** to add additional fields to Items and to enable Auto-filling on some fields.
- **TOTP Authentication** is available in the Web Vault, the Browser Extension and the WALLIX Authenticator App, to generate a TOTP code based on an Account Authentication Key.
- The **Username and Password Generator** can generate usernames, passwords or passphrases for Login Items.
- WALLIX Vault provides a number of **Reports** to ensure the security of passwords, logins and websites that are stored in the Vault.
- It is possible to **Deauthorize Sessions** on all logged-in devices. This is especially useful if you accessed WALLIX Vault from a public computer.
- The Vault can be **purged of its data** or **deleted entirely**.
