# Shared Vaults Overview

A Shared Vault is is a way of sharing items between other members. It is created and shared with other Members.

It can be renamed after creation.

A number of options are available from the Context Menu of a Shared Vault Item, depending on the Item Type, such as:

- Copy username: Copies the Username to the clipboard (for Login Items)
- Copy password: Copies the Password to the clipboard (for Login Items)
- Launch : Launches the URI associated with the Item (for Login Items)
- Attachments: Displays the Attachment Screen
- Collections: Displays the Collections Screen
- Delete: Deletes the Item (after Confirmation)

It can contain one or more Collections. It can contain one or more Items that can be shared with Members via Collections.

Members can be added with different Roles within the Shared Vault and given access to Collections .

Temporary access to a Shared Vault can be revoked or restored. Members can also be removed permanently or they can leave the Shared Vault.

A Shared Vault can be purged of its data (while keeping the Shared Vault) or deleted entirely.
